SNF is the largest polyacrylamide manufacturer in the world with 21 manufacturing units across the globe. SNF has opened a new manufacturing entity in western India, in the Kutch district of Gujarat state, that is easily accessible via road, railway, sea, and air.

The nearby Kandla port is one of India’s largest bulk chemical handling port. Mundra port, a little further away from the new plant, is the largest private container handling port of India. These logistic hubs will have a strong positive impact on our imports of raw materials in bulk and on our sales in domestic India as well as exports to the rest of the world.

SNF Gandhidham has started manufacturing anionic powder polyacrylamides. The total production capacity is 60,000 tonnes per year. These products will mainly cater to the Oil & Gas sector as well as, water treatment and mining industries.

SNF has been manufacturing liquid polyacrylamides in India since the early 90’s. In 2012 SNF started its new factory in Vizag, Andhra Pradesh with a capacity of 120,000 tonnes. This plant caters mainly to the water treatment, textile, ceramic, and paper industries.
